EXPERIENCE

Software Engineer. [PRIDE MICROFINANCE LTD.](#) Kampala, Uganda.

July-2023 - Present

- Implemented a Daily performance tracking application with React with Typescript and managed states with Redux.
- Designed an implemented a User Interface of an automated messaging application that send loans due SMS to clients and Birthday messages. The user interface is simply for reporting purpose to display the ammount of messages sent out monthly.
- Workin on an asset management application User interface displaying the available stock, tracking the request approval stages, displaying regional asset data from the various branches amon others.

Software Engineer. [COSEKE LTD.](#) Kampala, Uganda.

September 2023 - Present

- Implemented Elastic Search to enhance the retrieval of law reports from an electronic document management system, significantly improving document access and efficiency for all users
- Developed and implemented a Cron Job to manage document subscriptions for system users: This involved determining the subscription status of each user and integrating the payment module with Uganda Revenue Authority APIs. Additionally, I facilitated payments using MTN and Airtel APIs, ensuring seamless and efficient transaction processing.
- Designed an intuitive user interface for document preview and purchase: Ensured a seamless flow for generating a Payment Reference Number and facilitated payment for documents through the integration of MTN and Airtel APIs.

Software Engineer. [XAZU-Technologies](#). Kampala, Uganda. March 2021 - August 2023

- Designed a user interface to track mobile money transactions made by parents to students' cards or wristbands: The interface included charts displaying total purchases per school and per student over selected periods, significantly improving the efficiency of our support team by over 50%.
- Integrated Mobile Money APIs to facilitate transactions from parents' mobile money accounts to student cards: This integration improved the transaction rate by over 60%.
- Developed an interface to allow the parent's track their student's expenditure. The parent's can also determine his or her child's expenditure on a daily basis. This helped the parents plan when to deposit of their student's accounts.

PROJECTS

- Xazu Office App: Lead Front End Developer. office256.xazutech.com/

This is a platform used by the team at Xazu to manage support calls from parents regarding their students at the various schools

- Xazu School Application: [School Application](#)

This is the second version of the application to be used to manage all kinds of transactions by students with a school.

- Imuka Access Application: [Imuka-Access](#)
